

## COMP20030 Web Design Project

Server link:

<https://cssserver.ucd.ie/~2wdcote/project/project.html>

OPTION 2: Design a website targeting an audience interested in learning one of the following: musical instruments; foreign languages; or a STEM subject. Although the navigational structure of the website will be a particularly important design decision, the layout and presentation of the website should be such to maintain the audience's interest. Most importantly, for whatever domain you choose, you need to make design decisions that are appropriate for the target audience identified.

- Features 6 pages: Home, Discover, Songs, Useful Tips, Resources and Contacts
- All pages include a top navigation bar and a footer, using PHP to include those files
- The footer includes a button to toggle between normal and dark mode (change background colour)

HOME:

Responsive design

Button leading to another page

Java-scripted musical note icon

DISCOVERY:

Responsive design

Java-scripted paragraph linked to a button

SONGS:

Radio input form that uses a PHP form action to display a certain song depending on the choice

(ideally would have a lot more choices)

USEFUL-TIPS:

Responsive design

CONTACTS:

Responsive design

Radio and textual input form with form action to show the reader their input
